

COVID-19 MYTH BUSTERS

MYTH

People can die because of Covid-19 vaccination.

I'm not at risk for severe complications of COVID-19 so I don't need the vaccine.

FACT

There is no evidence that Covid-19 vaccination causes death. In fact, vaccination helps our immune system to fight the coronavirus. There can be some side effects of the vaccine such as fever, headache etc. but it is not fatal.

Regardless of your risk, you can still contract the infection and spread it to others, so it's important you get vaccinated.
