

# COVID-19 MYTH BUSTERS

## MYTH

The COVID-19 vaccine causes infertility in women.

Menstruating women should not take COVID-19 vaccination.

## FACT

No. COVID-19 vaccine does not affect fertility. All vaccines and their constituents are tested first on animals and later on humans to assess if they have any such side effects. Vaccines are authorized for use only after their safety and efficacy is assured. Do not believe such baseless rumors sent on social media.

This is a false information circulated on social media. Menstruation does not weaken your immune system or cause any problem. It is a natural and healthy process. Menstruating women can take COVID-19 vaccine.
